1987 CENSUS OF AGRICULTURE

ADVANCE STATE REPORT

NEBRASKA

AC87-A-31-000(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

ANTELOPE COUNTY, NE

AC87-A-31-003(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm--Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

–	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

ARTHUR COUNTY, NE

AC87-A-31-005(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

BLAINE COUNTY, NE

AC87-A-31-009(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

BOX BUTTE COUNTY, NE

AC87-A-31-013(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

BOYD COUNTY, NE

AC87-A-31-015(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

BUFFALO COUNTY, NE

AC87-A-31-019(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

BURT COUNTY, NE

AC87-A-31-021(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

CASS COUNTY, NE

AC87-A-31-025(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

CHERRY COUNTY, NE

AC87-A-31-(31(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

CLAY COUNTY, NE

AC87-A-31-035(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

COLFAX COUNTY, NE

AC87-A-31-037(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- \- Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

CUMING COUNTY, NE

AC87-A-31-039(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- \- Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

CUSTER COUNTY, NE

AC87-A-31-041(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

DAKOTA COUNTY, NE

AC87-A-31-043(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

DAWES COUNTY, NE

AC87-A-31-045(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

DIXON COUNTY, NE

AC87-A-31-051(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

DODGE COUNTY, NE

AC87-A-31-053(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

DOUGLAS COUNTY, NE

AC87-A-31-055(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

FILLMORE COUNTY, NE

AC87-A-31-059(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

FRANKLIN COUNTY, NE

AC87-A-31-061(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

FURNAS COUNTY, NE

AC87-A-31-065(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

GARDEN COUNTY, NE

AC87-A-31-069(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

GARFIELD COUNTY, NE

AC87-A-31-071(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

GRANT COUNTY, NE

AC87-A-31-075(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

HAMILTON COUNTY, NE

AC87-A-31-081(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- \- Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

HARLAN COUNTY, NE

AC87-A-31-083(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

HAYES COUNTY, NE

AC87-A-31-085(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

HOOKER COUNTY, NE

AC87-A-31-091(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

JEFFERSON COUNTY, NE

AC87-A-31-095(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- \- Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

JOHNSON COUNTY, NE

AC87-A-31-097(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

KEITH COUNTY, NE

AC87-A-31-101(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

[2]Data are based on a sample of farms.
[3]Data for 1982 do not include imputation for item nonresponse.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

KNOX COUNTY, NE

AC87-A-31-107(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

LINCOLN COUNTY, NE

AC87-A-31-111(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

MC PHERSON COUNTY, NE

AC87-A-31-117(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

MERRICK COUNTY, NE

AC87-A-31-121(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

NEMAHA COUNTY, NE

AC87-A-31-127(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

OTOE COUNTY, NE

AC87-A-31-131(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

PAWNEE COUNTY, NE

AC87-A-31-133(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- \- Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

PHELPS COUNTY, NE

AC87-A-31-137(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

POLK COUNTY, NE

AC87-A-31-143(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- \- Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

RED WILLOW COUNTY, NE

AC87-A-31-145(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

RICHARDSON COUNTY, NE

AC87-A-31-147(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

SARPY COUNTY, NE

AC87-A-31-153(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

SCOTTS BLUFF COUNTY, NE

AC87-A-31-157(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- \- Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

SHERMAN COUNTY, NE

AC87-A-31-163(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

STANTON COUNTY, NE

AC87-A-31-167(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

THOMAS COUNTY, NE

AC87-A-31-171(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. 1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

THURSTON COUNTY, NE

AC87-A-31-173(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- \- Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

WASHINGTON COUNTY, NE

AC87-A-31-177(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- \- Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

WHEELER COUNTY, NE

AC87-A-31-183(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.
